**WATERAX** is proud to announce its first unit designed for private landowners. If you live near or in a wildfire area and your property is in danger as the fire season approaches, we've got your back! We can help you be prepared and stay safe.

Protect your home and property from wildfires with the VERSAX® Fire Pump Cart System, fully equipped with **professional grade equipment** with a powerful Honda self-priming 2-stage fire pump. This home fire pump is **simple** to set up, operate, **easy** to maneuver and offers **superior performance**. You can use this fire pump near a lake or a private pool and when you're done, clean up and storage is effortless.

The VERSAX® Fire Pump Cart System is brought to you by **WATERAX**, makers of portable high-pressure fire pumps such as the MARK-3® and the BB-4®, trusted by the wildland firefighting

community since the 1920's. Our pumps are as tested and proven as the men and women who use them every day.

The VERSAX® is a versatile, rugged, and economical twin-impeller self-priming pump **powered by a Honda engine** for superior water transfer performance as well as the ability to combat fire from a greater distance and at an elevation.

This unit was conceived with the same level of reliability and effectiveness required by the pros. Built with an original **WATERAX** self-priming 2-stage centrifugal fire pump.

> Manual recoil starting system AND electric start option!

> Premium forestry hose

Having a fire pump accessible at all times, for high risk and high value residential properties, means you are ready and equipped. Protect your defensible space and **reduce the risk of the fire spreading** to neighboring homes or the surrounding forest. Looking after your defensible space gives your property a fighting chance against an approaching wildfire before the firefighters arrive. While **we do not encourage you to fight a raging wildfire on your own, you can make a difference with the right plan and the appropriate equipment.**

The VERSAX® is a multipurpose fire pump that can also be used for other applications such as tank filling, water transfers and on small utility vehicles.

Prepare homes and property in the WUI according to the fire prevention information found at sources such as NFPA's Firewise® Communities website, or FireSmart Canada and evacuate according to common sense or as soon as authorities order an evacuation.
